

09/09 Go: for if...elif...else

Take Percentage from user and print their result

85-100 $\Rightarrow$ distinction

60-84 $\Rightarrow$ First class

50-59 $\Rightarrow$ Second class

35-49 $\Rightarrow$ Pass

0-34 $\Rightarrow$ Fail

Code :- Percentage = float(input("enter your percentage: "))

if (Percentage $\geq$ 85 and Percentage $\leq$ 100):

Print ("distinction")

elif (Percentage $\geq$ 60 and Percentage $\leq$ 84):

Print ("First class")

elif (Percentage $\geq$ 50 and Percentage $\leq$ 59):

Print ("Second class")

elif (Percentage $\geq$ 35 and Percentage $\leq$ 49):

Print ("Pass")

```
elif (Percentage <= 0 and percentage <= 34):  
    Print ("fail")  
else:
```

```
    Print ("Invalid input")
```

o/p :- Enter your percentage : 128
Invalid input

Write a program to check the given number is even or odd

```
n = int (input ("enter a value :"))
```

```
if (n % 2 == 0):
```

```
    print ("even")
```

```
else:
```

```
    print ("odd")
```

o/p :- enter a value : 8
even

Write a program to check the given input is positive numbers, negative numbers or zero

```
n = int (input ("enter a num :"))
```

```
if (n > 0):
```

```
    Print ("positive")
```

```
elif (n < 0):
```

```
    Print ("negative")
```

```
else:
```

```
    Print ("Zero")
```

o/p :- Enter a num : 58
Positive
